

Why did we develop *Ready* Mathematics?

At Curriculum Associates, we strive to provide quality educational materials that make classrooms better places for teachers and students. When we developed *Ready*® Mathematics, we built the program to provide the focus, coherence, and rigor required to raise student achievement, integrate the Mathematical Practices throughout, and help students realize their full potential to become college and career ready. We integrated mathematical discourse, discussions about multiple strategies and models, and point-of-use teacher support into the lesson design to make standards-based instruction manageable for teachers so they could focus on what they do best — teach. We aim to continually enhance and refine the *Ready* Mathematics program and are always seeking feedback from students, parents, teachers, administrators, and leaders in the mathematics education community. When EdReports' independent team of experts asked to review *Ready* Mathematics, we were eager to receive their feedback as well.

Praise for *Ready* Mathematics

The Curriculum Associates' team greatly appreciates the outstanding recognition *Ready* Mathematics received from EdReports' panel of experts. Our team values EdReports' thorough analysis of the *Ready* program and is honored by the outstanding review that recognizes our program's strengths in comparison with other widely used instructional materials. These accolades reinforce what we hear from educators around the country who report significant growth in students' mathematical understanding and engagement — the most meaningful praise of all.

About *Ready* and *i-Ready*

Although it was not part of EdReports' review, Curriculum Associates' digital *i-Ready*® product was mentioned in several places in the report. *i-Ready* is often used in conjunction with *Ready* to seamlessly integrate diagnostic and standards-based data, personalized digital instruction, and targeted differentiation resources to make a data-driven, blended learning platform a true reality. About Curriculum Associates

Curriculum Associates was founded in 1969 with a simple but powerful mission of “making classrooms better places for teachers and students.” That mission is truer than ever today, as our programs and services have expanded to serve over 6 million students in schools and districts across all 50 states. As our products have grown in popularity, our team has more than tripled in size in the last 5 years — particularly on our service team — so that we can provide world-class support to teachers and administrators.

Curriculum Associates publishes mathematics and reading/ELA programs for grades K–8, as well as early childhood and Special Education inventories and screens for children from birth through high school.
